Cristiano Ronaldo Goals Prediction

AI Course Project Proposal | Muhammad, FUAAST, Karachi

1. Selected Player

Cristiano Ronaldo (Portuguese footballer, forward)

2. Objective

Predict how many goals Cristiano Ronaldo will score in his next match.

3. Approach

Supervised learning (the output is a number, goals).

4. Model

Decision Tree (main model), compared with **Random Forest**.

5. Reason

• Supervised: every past match has a known goals value, so the data is labeled.
• Decision Tree: handles features like opponent, home or away and competition, captures non-linear patterns, and is easy to interpret.
• Random Forest: combines many trees to reduce overfitting and give more stable predictions.

6. Dataset (Authentic Sources)

Main source (Sofascore): Cristiano Ronaldo match-by-match stats
https://www.sofascore.com/player/cristiano-ronaldo/750

Verification source (ESPN): Cristiano Ronaldo player stats
https://www.espn.com/soccer/player/_/id/6807/cristiano-ronaldo

Match records (opponent, home/away, minutes, shots, goals) will be collected from Sofascore and cross-checked against ESPN to confirm they are authentic.
